

Enterprise Asset Management (EAMS) v15

CM (Corrective Maintenance) Work Order Templates

End User Documentation

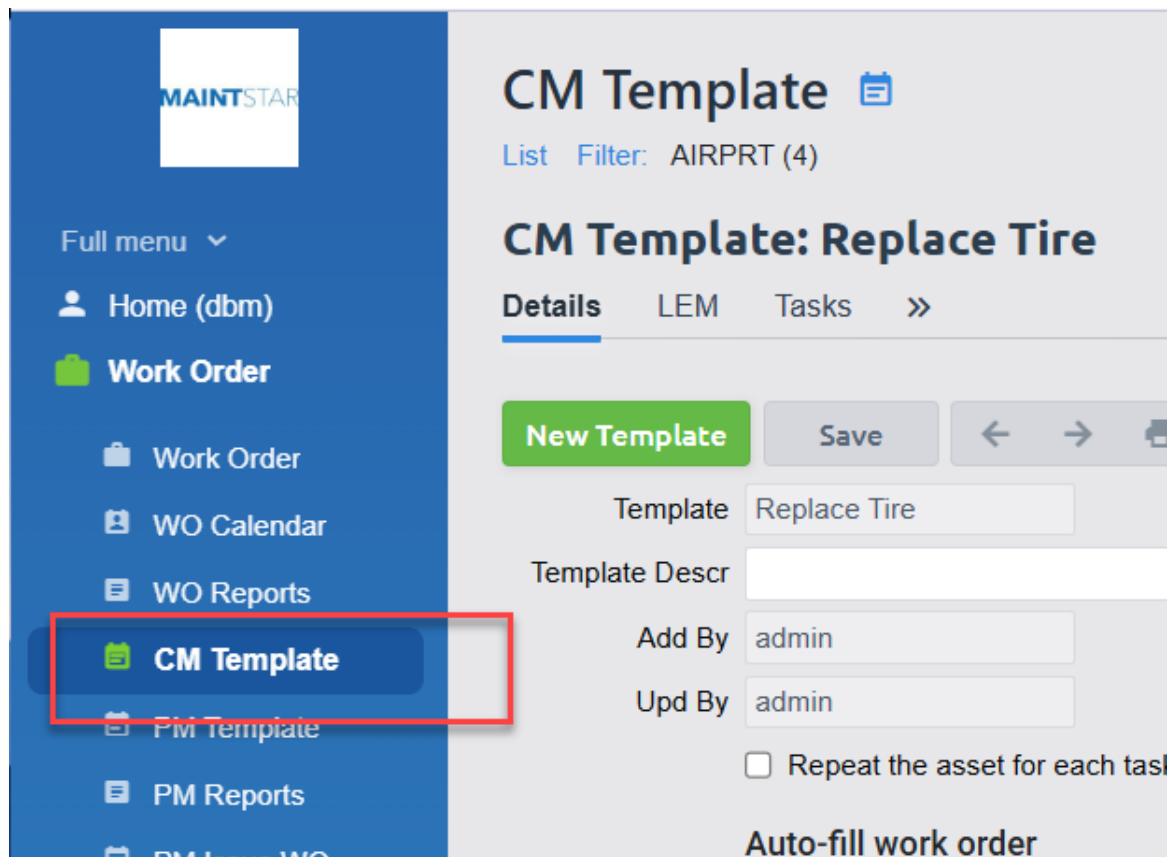

Update 1/20/25

Background

Maintstar has a new feature for Work Orders. It is a template which holds a configuration for common work orders that you perform periodically. It is like the PM template with one big difference. The PM template holds configuration for Work Orders, but it is tied to frequency and to a schedule. The purpose of the PM template is to create repeated Work Orders on a cyclical basis.

The new CM Template has no frequency and is not tied to a repeated schedule in any way. The CM Templates can be created ahead of time and saved. You can have as many CM templates as you like. These are stored in the CM template section on the Work Order menu. You can apply them for a work order whenever you want. Think of the CM Templates as a library of common work orders which you can select and create as needed with much of the work order already filled in. MaintStar still has a Work Order duplication feature. If you used the duplication feature often, you can now create a template and build the work order from the template rather than searching for a previous work order to duplicate from.

Instructions

The screenshot shows the MAINTSTAR interface. On the left, a blue sidebar contains a 'Full menu' dropdown and several navigation items: 'Home (dbm)', 'Work Order' (with a folder icon), 'Work Order' (with a folder icon), 'WO Calendar' (with a calendar icon), 'WO Reports' (with a list icon), 'CM Template' (with a calendar icon and highlighted by a red box), 'PM Template' (with a calendar icon), 'PM Reports' (with a list icon), and 'PM Issue WO' (with a calendar icon). The main content area is titled 'CM Template' with a calendar icon. Below the title, it says 'List Filter: AIRPRT (4)'. The main heading is 'CM Template: Replace Tire'. Below this, there are tabs: 'Details' (selected), 'LEM', 'Tasks', and '>>'. A green 'New Template' button is prominent. To its right are 'Save', '<', '>', and a trash icon. Below these are input fields: 'Template' (containing 'Replace Tire'), 'Template Descr' (empty), 'Add By' (containing 'admin'), and 'Upd By' (containing 'admin'). There is a checkbox labeled 'Repeat the asset for each task' which is currently unchecked. At the bottom, there is a section titled 'Auto-fill work order'.

Creating the CM Template

The templates are created and stored in the Work Order>CM Template section.

Create the CM template with the configuration you want in the resulting Work Order.

You can set things such as:

- Work Order type
- Workgroup
- Priority
- Work In Progress code
- Text instructions in either
 - The Wo Summary box, or
 - The Asset Work Description field, whichever you use.
- You can enter estimated hours and costs
- You can enter LEM or fill the Lem from a Crew.
- You can include attachments, and you include tasks and checklists.
- Whatever you create and save in the CM Template will be added to the work order you create from the template.

The Asset Type Tab

The asset type tab allows you to list asset types that this template could be used with.

This is optional.

If you do not associate any asset type with the template it will be available for any asset types. If you do associate the template with one or more asset types, it will be available to use ONLY with those types.

- Work Order
- WO Calendar
- WO Reports
- CM Template**
- PM Template
- PM Reports
- PM Issue WO
- Project
- Crew
- Checklist

Making a Work Order from a CM Template

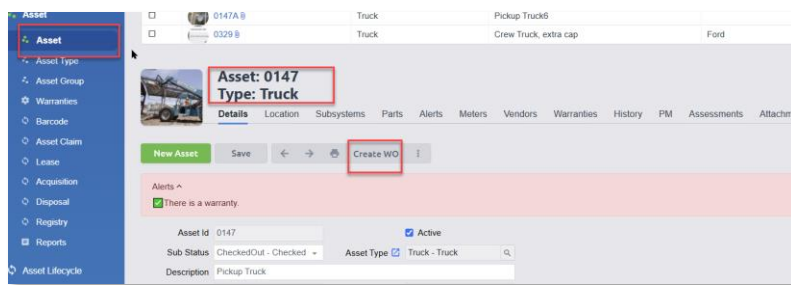

There are 2 ways to use the CM Template to make a work Order.

- Start from an asset screen
- Start from the Work Order Screen

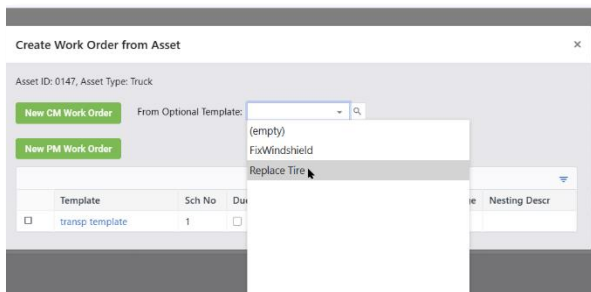

Starting from an Asset Screen

You can start the work order from the asset screen.

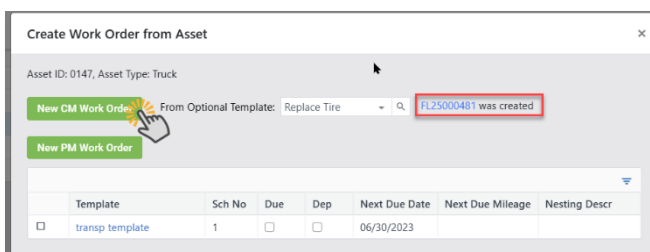

1. Select the asset for your work order by locating it in the Asset section.
2. Click the Gray 'Create WO' on the tool bar of the asset.

3. Select the CM Template from the drop down

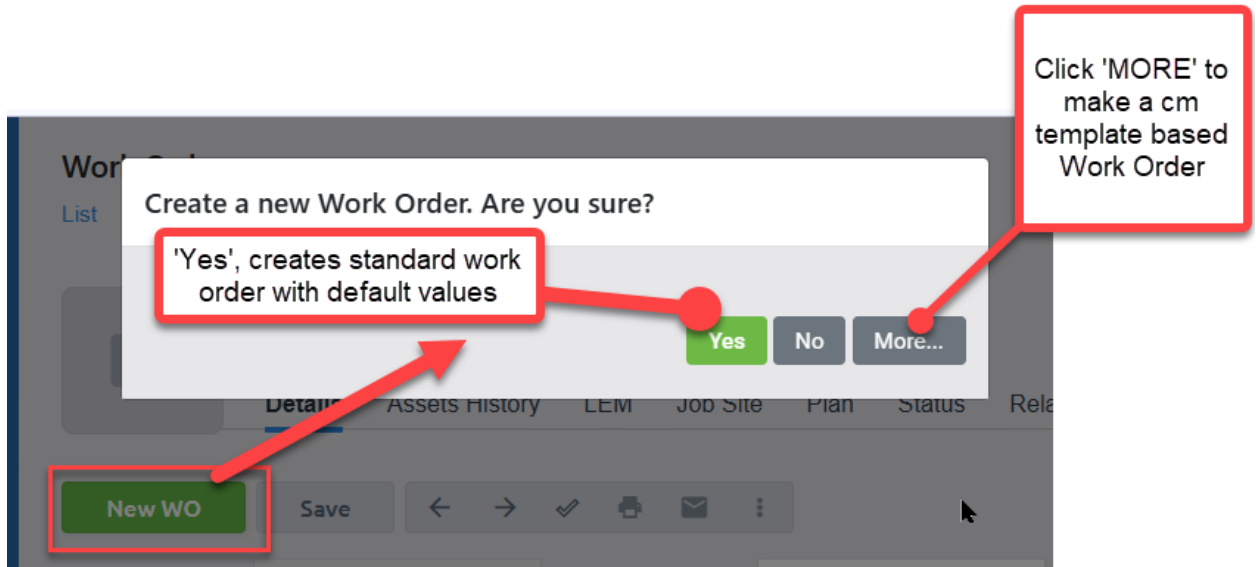

4. Click the green 'New CM Work Order' button, a new work order will be created with all the elements from the CM Template. (There is also an option to create a new PM work order. Select the Pm template then click 'New Pm Work Order')

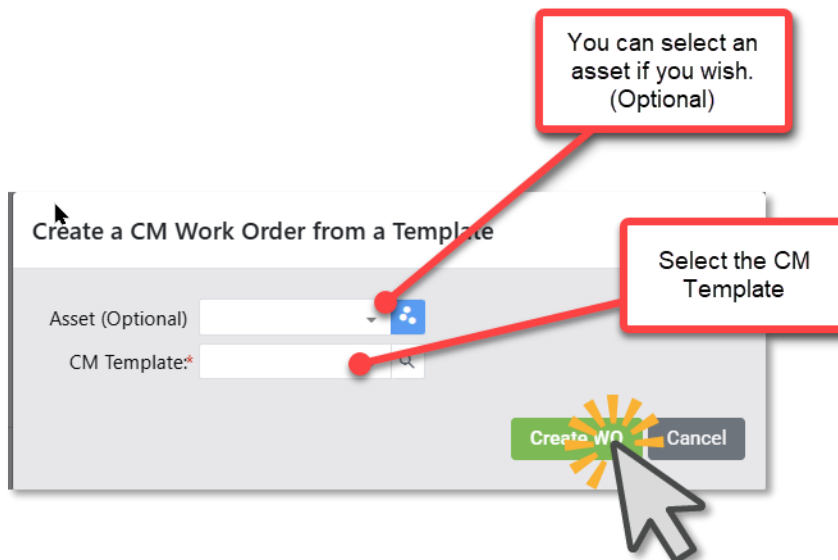

Starting from a Work Order Screen

From the work order screen,

1. Click the Green 'New WO button' will open as usual with nothing from a template prefilled.

2. If you click "more" a second popup window appears.

3. A new work order will be created from the template. This Work Order will be filled with all the field values you have in the template. If you need to change any values, you can edit the work order after it has been created.
