

Enterprise Asset Management (EAMS) v15

Notifications

End User Documentation

Update 3/1/2024

Notifications

MaintStar can send email or text messages to internal and external users under a variety of circumstances. For Work Order, this includes:

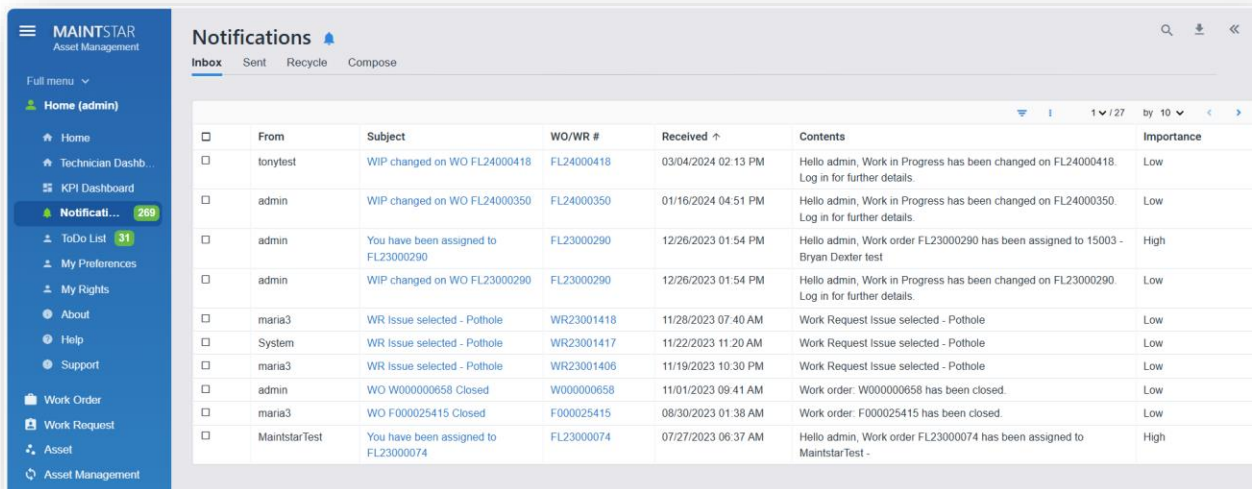

- When a WO is created
- When a WO is saved with a new value in "Assigned To", or "Work in Progress"
- When a WO is closed
- When a part is received
- When a task is complete
- When a particular asset is added to a WO

There are also notifications for Work Requests. More information can be found in the Work Request Chapter.

Notification Types

Notifications can be sent in three different ways: Internal Notifications, Email, and Text (SMS).

Internal notifications are accessed in Home -> Notifications. This is a simple solution if you prefer to check your messages in the MaintStar application, or keep a record of them.

The screenshot shows the 'Notifications' section of the MaintStar application. On the left is a sidebar with navigation options: Home (admin), Home, Technician Dashboard, KPI Dashboard, Notifications (269), To Do List (31), My Preferences, My Rights, About, Help, Support, Work Order, Work Request, Asset, and Asset Management. The main area displays a table of notifications with columns: From, Subject, WO/WR #, Received, Contents, and Importance. The table lists various notifications, including work order changes, assignments, and task completions.

	From	Subject	WO/WR #	Received	Contents	Importance
☐	tonytest	WIP changed on WO FL24000418	FL24000418	03/04/2024 02:13 PM	Hello admin, Work in Progress has been changed on FL24000418. Log in for further details.	Low
☐	admin	WIP changed on WO FL24000350	FL24000350	01/16/2024 04:51 PM	Hello admin, Work in Progress has been changed on FL24000350. Log in for further details.	Low
☐	admin	You have been assigned to FL23000290	FL23000290	12/26/2023 01:54 PM	Hello admin, Work order FL23000290 has been assigned to 15003 - Bryan Dexter test	High
☐	admin	WIP changed on WO FL23000290	FL23000290	12/26/2023 01:54 PM	Hello admin, Work in Progress has been changed on FL23000290. Log in for further details.	Low
☐	maria3	WR Issue selected - Pothole	WR23001418	11/28/2023 07:40 AM	Work Request issue selected - Pothole	Low
☐	System	WR Issue selected - Pothole	WR23001417	11/22/2023 11:20 AM	Work Request issue selected - Pothole	Low

☐	maria3	WO F000025415 Closed	F000025415	08/30/2023 01:38 AM	Work order: F000025415 has been closed.	Low
☐	MaintstarTest	You have been assigned to FL23000074	FL23000074	07/27/2023 06:37 AM	Hello admin, Work order FL23000074 has been assigned to MaintstarTest -	High

Email notifications require that the user has a valid email address on record. The user can access their own email in Home -> My Preferences, or an administrator can access it via Security -> Users.

Text (SMS) notifications require that the user has a valid Cell Phone on record. The user can access their own cell number in Home -> My Preferences, or an administrator can access it via Security -> Users. Note that a country code is needed for texting to work (1 for USA). This can be accomplished in two ways:

- The user manually includes their country code in their phone number (ex: 1-555-555-5555)

- The administrator can have the system automatically prepend a Phone Country Code. This can be configured in Security -> System Settings.

User Preferences

User notification preferences determine which notifications will be received:

- Notify by Text
- Show Notifications in Notifications list (aka Internal Notifications)
- Notify by Regular Email

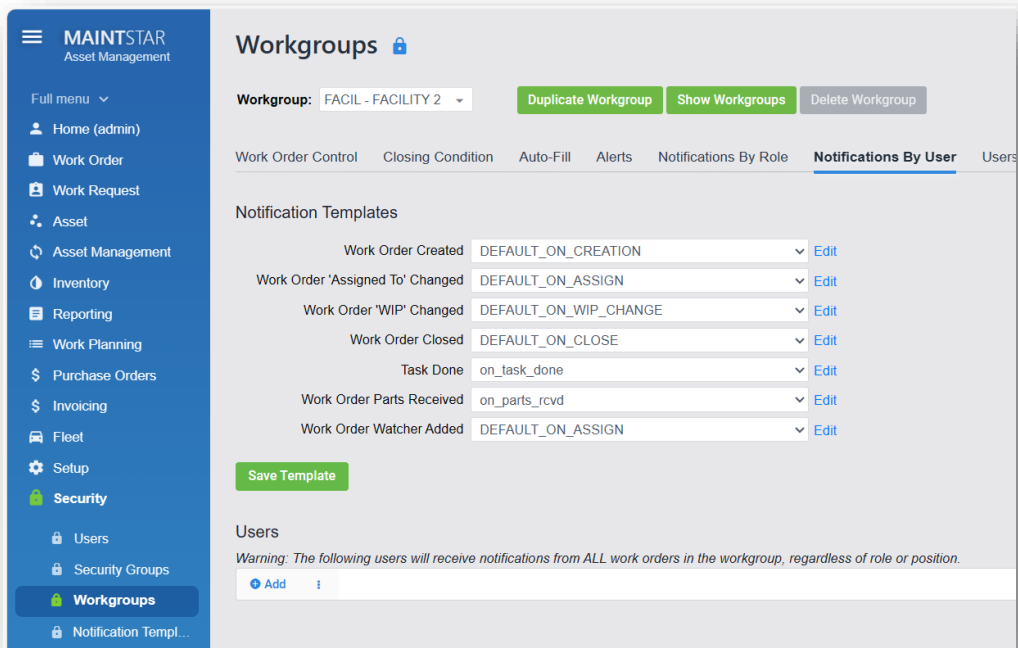

These options can be accessed by the user themselves in Home -> My Preferences, or by an administrator in Security -> Users. A user can receive any combination of internal notifications, email, or texts depending on these settings.

The screenshot shows the 'My Preferences' page in the MAINTSTAR Asset Management system. The left sidebar contains a menu with options: Home (tony), Home, Technician Dashb..., Notifications (599), ToDo List (202), My Preferences (selected), My Rights, About, Help, Work Order, and Work Request. The main content area is titled 'My Preferences' and includes tabs for General, Attachments, My Assets, My Hours, My Time Off, and Colors. The 'General' tab is active, displaying user information: Full Name (231), Primary Phone (+1 (805) 279-8865), Email (tony@maintstar.com), and Supervisor (13575). There are checkboxes for 'Show Notifications in Notifications list' (checked), 'Notify By Text' (unchecked), and 'Notify By Regular Email' (checked). At the bottom, there are checkboxes for 'Auto-fill labor ID in LEM with user ID (mobile)' and 'Auto-fill labor ID in LEM with user ID (desktop)', both checked, and a 'Two Factor Authentication' checkbox which is unchecked. 'Save' and 'Change Password' buttons are at the bottom right.

If the administrator prefers the user to not have control over notification preferences, they can check May Edit Notifications Setup in Security -> Users.

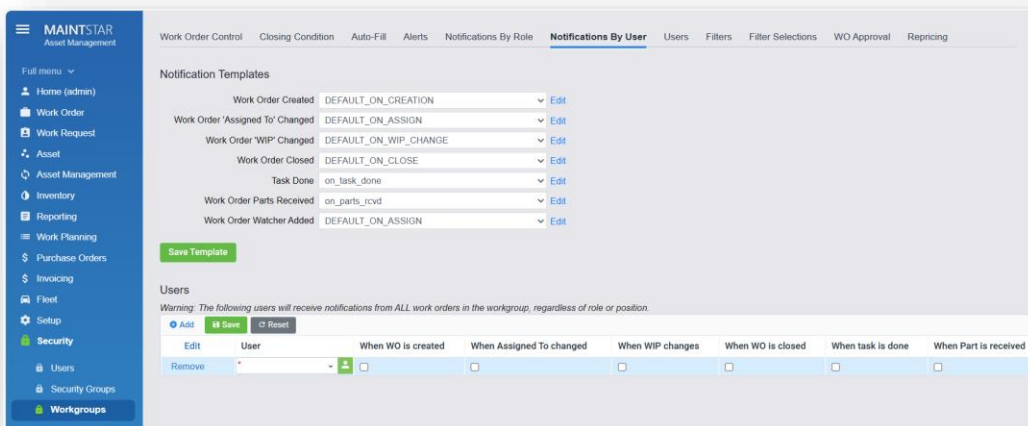

Work Order Notification Setup

Configuring system wide Work Order Notifications is a system administrator task. To configure notifications for work orders, you will find two tabs in Security -> Workgroups: Notification by User and Notification by Role.

- Notification by Role: when configured, staff will only receive notifications for things directly relevant to them. You will see a grid of checkboxes, which will determine who receives notifications and under which circumstances. For example, you can set it up so that only "Assigned To" receives a message when "Assigned To" is changed, but "Supervisor" will receive a message when the WO is created or when the WO is closed.
- Notification by User: Allows specific staff to be notified when specific things happen. For instance, when a Work Order is closed or changed and you only want one user to be notified, use this method.

NOTE: You can not further define actions, ie "I want this, but not that".

Both tabs also have dropdowns where you can choose Templates. Templates determine what the message says when it's generated. MaintStar comes with default templates, but you can also create your own.

WR Notification Setup

Notifications for Work requests work slightly differently. When a WO is created from a WR, this will trigger the same way as any other WO notification. But for other WR-specific events, notifications can be configured in Work Request -> WR Settings. Two tabs are relevant here: Notif. Templates and Operations.

Operations is the tab for setting up Operations and Issues to categorize work requests (see documentation on WR Issues and Operations). On this screen, you can assign an internal user (i.e. not a member of the public) for notifications on a specific Issue or Operation. To do this, simply edit an issue or operation and add or remove users to that row as needed.

What are these users being notified for exactly? This is where the Notif. Templates tab becomes relevant. On the Notif. Templates tab, the Notifications for Internal Users section determines which notifications those users receive and when they receive them:

- Notify when Operation selected will trigger when an internal user is assigned to a particular Operation and a WR is created for that Operation.
- Notify when Issue selected will trigger when an internal user is assigned to a particular Issue and a WR is created for that Issue.
- Notify when WR is assigned is sent to the assigned user when a WR is created with an assignee or is edited to have an assignee.
- Notify supervisor when WR is assigned is sent to the user in the Supervisor field when a WR is created with an assignee or is edited to have an assignee.
- Notify when WR is closed is sent to Operation users when a work request is closed.
- Notifications to Requester by Group - These notification options can be customized based on individual groups. Configure one group in particular by selecting it on the dropdown. Notifying a requester means notifying the user in the Customer ID field.

All of these options have a corresponding Template dropdown for choosing a notification template (see Templates section). The notifications will not function unless a template exists for that notification.

Notification Templates

Templates determine what a message will say when it's sent. While MaintStar comes with default templates, you can also create your own to better suit your needs. You can view, edit, and create templates in Security -> Notification Templates.

To create a new Template, click "Add" on top of the list of existing templates. Take careful note of the Template Type - this will determine where in the system you will be able to choose the template. Templates can contain special variables, which will be replaced based on the specific work order or work request. For example:

Work order \$WONO has been assigned to \$ASSIGNTO
might become: Work order W000000001 has been assigned to JohnDoe
A full list of available fields can be found on the right-hand side, along with descriptions. These fields are different depending on the Template Type. These fields will work in both the Subject line and the Body lines.

You will notice there are two text boxes for the body of the message: Email Text and SMS and MaintStar. Both can be filled out.
