

Enterprise Asset Management (EAMS) v15

Asset Disposals

End User Documentation

Update 11/22/2024

Asset Disposals

MaintStar is a complete Asset Management system that tracks and manages an asset's life from birth to retirement. Having this complete record of an asset allows administrators to perform appropriate maintenance, gain awareness of an asset's condition and perform capacity planning for life and replacement.

The Asset Disposal tool allows administrators to track and retire asset(s) and assign an associated disposal record. This can be particularly helpful for vehicles, equipment or other vertical assets. While assets can always be retired manually in the Asset screens, the Disposal tool provides a simple interface for completing bulk asset retirements.

Disposal Tool

The Disposal Tool can be found under Assets > Asset Disposals.

Disposal No.	Asset ID	Asset Type	Status	Condition	Year
1	00test2	Car			
1	0147	Truck			
1	015	hydrant			
1	094 006700400	parcel	Approved		
1	102A	regVACTRUCK	Done

Details: This page contains the Disposal Record details:

- Asset ID – Associated Asset Record
- Status – Disposal Record Status (Marking a Record as “Done” marks the asset as Inactive)
- Condition – Current Condition of Asset
- Reason – Reason for Disposal
- Recommended Method of Disposal – Final Disposal Method

Warnings: Disposal Record cannot be marked as “Done” until the following is true:

- Work Orders: All Open Work Orders containing the asset must be closed
- PMs: Asset must be removed from PMs
- Asset Groups: Asset must be removed from Asset Groups

Attachments: Associated attachments, pictures, documents, etc

Creating a New Disposal Record

Details Page

1. To create a New Disposal Record, simply click “New Asset Disposal”.
2. Select the desired Asset from the lookup field.
3. Select the Status, Reason, Condition and Method of Disposal Fields (if used). Only the status is absolutely required.
4. The Status field can be used to track Disposal records throughout the Disposal process.

5. Utilized the “Warnings” tab to track any open Work against the Asset. The Disposal Record cannot be marked as “Done” until the following is true:
 - Work Orders: All Open Work Orders containing the asset must be closed
 - PMs: Asset must be removed from PMs
 - Asset Groups: Asset must be removed from Asset Groups
6. All Warnings must be remediated before the Asset can be marked as Done (and inactive)
7. To remediate a Warning, simply click on the link(s) which open in a new tab.

Asset Disposal 1 - Truck - 0147

Details **Warnings** @ Attachments

Asset cannot be marked as disposed until Open Work Orders containing the Asset have been closed; and Asset is removed from PM Schedules; and Asset is removed from Asset Groups.

Asset Groups

No records found

8. If there is an attempt to close an Asset before Warnings are remediated the following error will display:

dev.maintstar.co says

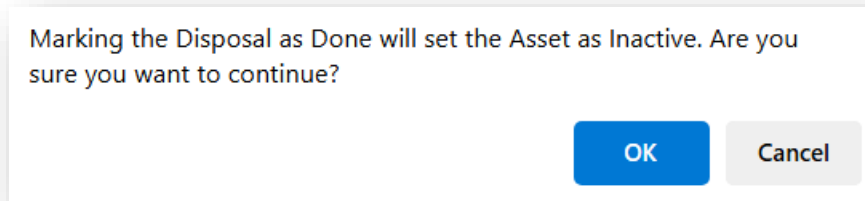

Asset 0147 - Truck cannot be marked as disposed until:

- Open Work Orders containing the Asset have been closed,
- Asset is removed from PM Schedules,
- Asset is removed from Asset Groups.

OK

9. Once all Warnings are taken care of, return to the Details page, Status, and mark the asset as “Done”. The following message will appear to indicate that this will mark the corresponding asset as

“Inactive”:

10. **Note: MAINTSTAR DOES NOT DELETE ASSETS, ONLY MARKS THEM AS INACTIVE.**

Re-Activating an Asset

To reactivate an Asset, simply go to Assets > Assets, set the filter to look for Inactive Assets, search for the desired Asset and check the “Active” box, then click Save.
